Watching by your smartphone

It can provide you a live video via your smartphone.

Two-Way communication

Recording button

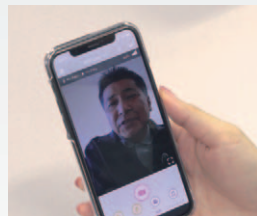

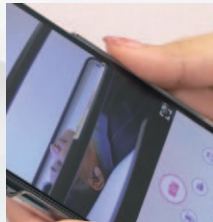

You can play music that is stored in your smartphone.

// Camera You can check the real-time situation

It provide you a live video via your smartphone. By pinching out on the screen, you can zoom in on the screen display.

The recorded images and videos can be reviewed in the photo gallery.

iBaby has an infrared light built in therefore when a room is completely dark, the camera can still display a clear image.

// Conversation & Melody

Two-Way communication

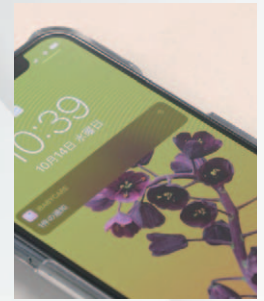

By clicking "Listen" and "Talk" icons, it allows the two-way communication possible.

// Sensor Monitoring by 4 sensors

3 internal sensors and Excel's external sensors enable you to watch your important people.

When an unusual event is detected an alert message will be displayed on your smartphone. *Alert "ON" is required to use this function.

Automatically records a video 9 seconds before the detection sensor is activated. *This function is only available in RH7000.

Motion Sensor

When an object moves within the range of the camera, iBaby detects it.

Sound Sensor

It can detect and alert the sound when you set alert "ON".

Temp./Humidity Sensor

The room temperature and humidity can be measured real time and displayed.

External Sensors

You can care the patient more efficiently when you connect to external sensors such as infrared sensor, floor sensor etc.
